Algorithm :

1. Start.

2. Create a node containing the movie name, `prev` pointer, and `next` pointer.

3. Initialize `head = NULL`.

4. Display the menu:

   - Add Movie

   - Remove Movie

   - Display Movies

   - Exit

5. Enter the user's choice.

6. If the choice is 1, enter the movie name and add a new node at the end of the list.

7. If the choice is 2, search for the movie and delete its node if found.

8. If the choice is 3, traverse the list and display all movie names.

9. If the choice is 4, exit the program.

10. If the choice is invalid, display an error message.

11. Repeat until the user selects Exit.

12. Stop
